

Electrical locking device (ELD) and controllers.

Electrical locking device (ELD) and its controller are dedicated for wireless, remote, keyless locking / unlocking cargo doors of semitrailers, containers, storage facilities, power substations and other remote sites.

The electrical locking device can be controlled in three ways:
1. Remote Telematics Unit (RTU) controls the ELD by help of controller.
2. Remote Telematics Unit (RTU) controls the ELD by help of controller with Bluetooth interface and alternatively by smartphone with Mobile App.

3. Smartphone with installed Mobile App controls the ELD by help of controller with Bluetooth interface.
